                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention is useful for identifying a binding agent, preferably a protein or a drug that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC NIDD (NGFR-interacting Death Domain), with a candidate binding agent, and detecting the association of the domain and the candidate binding agent, compared two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or spectroscopy (MS) and FPA. The invention is useful for modulating the level of a cell process such as cell proliferation, cell adhesion, cell evel of a cell process such as cell proliferation and B cell communoglobulin class switching, in particular apoptosis within a cell immunoglobulin class switching, in particular apoptosis within a cell cantibody specifically reactive with CTDD DD C. trachomatis, C. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for detecting a Chlamydia infection. The convention is useful for modulating the activity of oncogenic proteins, treating a pathology caused by the oncogenic proteins and for treating a pathology caused by the oncogenic proteins and for corteins by modulating the activity of bacterial for corteins by modulating the activity of bacterial for sepsis, altermanity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, thorease, therefore the activity of bacterial protein and gene therapy. The present sequence is human IRAK4 DD cDNA
                                                                                                                                                                                                                                                                                                                                                                       Match:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
The present invention provides novel death Domain (DD) and death effector domain (DED) proteins and nucleic acids encoding them. The invention also provides death domain containing protein such as Chlamydia trachomatis death domain containing protein (CTDD) DD and neural growth factor receptor-interacting death domain (NIDD) DD and neural growth factor identifying a binding agent (e.g. protein or drug) that binds a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD, DED4 or NIDD with a candidate binding agent and identifying an effective agent (e.g. protein or drug) that modulates the association of a DD, DED or NB-ARC domain with protein that binds the DD, DED or NB-ARC domain. The invention is also useful for modulating the level of cell process such as apoptosis, cell adhesion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               17-NOV-2000;

DDs, DEDs and NB-ARC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allergy, allograft rejection, sepsis and other diseases. DD, DED or NB-ARC domain proteins are used to treat infection, allergy, autoimmunity, inflammation, allograft rejection, sepsis keratinocyte hyperplasia, neoplasia, keloid, benign prostatic hypertrophy, fibrosis, inflammatory hyperplasia and smooth muscle cell proliferation in arteries following balloon angioplasty (restenosis). The invention is also used in antibody therapy and gene therapy. The present sequence is human interleukin-1 receptor-associated kinase (IRAK)-4 DD cDNA

The genes encode cancer associated antigen precursors. These gene products are useful in methods for preventing, diagnosing and/or treating disorders, especially cancer, associated wi abnormal expression of human cancer associated antigens. The method comprises contacting a sample from a subject with an agent that specifically binds to the nucleic acid molecule or expression product fragment) complexed with a human leukocyte antigen (HLA) molecule and determining the interaction between the agent and the nucleic acid molecule or the expression product as a determination of the disorder

The invention consists useful for identifying a binding agent, preferably a protein or a drug that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain in the candidate binding agent and controlled the association of the domain and the candidate binding agent and detecting the association of the domain and the candidate binding agent and controlled the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor receptor interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DEDA or NIDD with a candidate CC binding agent and identifying an effective agent (e.g. protein or drug) that modulates the association of a DD, DED or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC combulating the level of cell process such as apoptosis, cell adhesion, CC cell proliferation, cell stress responses, responses to microbial CC domains and/or anti-DED or anti-NB-ARC domain antibodies are CC domains and/or anti-DED or anti-NB-ARC domain antibodies are CC domains and/or anti-DED or anti-NB-ARC domain antibodies are CC inflammation, allergy, allograft rejection, sepsis and other diseases. CC inflammatory inflammation, allograft rejection, sepsis and sther diseases. CC hyperplasia, neoplasia, keloid, benign prostatic hypertrophy, fibrosis, inflammatory hyperplasia and smooth muscle cell proliferation in arteries CC interleukin-1 receptor-associated kinase (IRAK)-4 full length gene
                                                                                                                                                                                                                                                                                 AAS76805 standard; cDNA; 1668
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1383

The invention relates to isolated polynucleotide (I) and polypeptide (II) consequences. (I) is useful as hybridisation probes, polymerase chain consequences. (I) is useful as hybridisation probes, polymerase chain consequence (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consequences. (I) is useful in gene therapy techniques to restore normal consequences of the investigation of (II) or to treat disease states involving (II). (II) is consequenced in tissue, as molecular weight markers and as a food consupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The collapsettice and polynucleotide sequences have applications in consisting forensics, gene mapping, identification of mutations constituted sequences have applications in the produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this consistency of the invention of the sequence of the invention of the sequence of the invention of the collapse of the invention of the sequence of the invention of the collapse of the invention of the collapse of the collaps

       CC The invention relates to an isolated polypeptide comprising a death cf domain (DD), death effector domain (DD) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC (CC NIDD (NGFR-interacting Death Domain), with a candidate binding agent, DED or NB-ARC (CC NIDD (NGFR-interacting Death Domain), with a candidate binding agent, CC period of the association of the domain and the candidate binding agent, CC period of a cell process such as cell proless to microbial infection and B cell evel of a cell process such as cell proless within a cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell candidate binding agent, CC immunoglobulin class switching, in particular apoptosis within a cell entibody specifically reactive with CTDD DD of C. trachomatis, C. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for detecting a Chlamydia infection. The CC invention is useful for modulating the activity of oncogenic proteins, CC crowdiary a pathology caused by the oncogenic proteins and for treating a pathology caused by the oncogenic proteins and for creating bacterial infections by modulating the activity of bacterial for cliscovery of drugs that suppress infection, inflammation, allergy, caused by the oncogenic proteins and for treating a pathology caused by the oncogenic proteins and for creating bacterial infections by modulating the activity of bacterial for cliscovery of drugs that suppress infection, inflammation, allergy, caused by the oncogenic proteins and for treating immune-based pathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, fibrosis, the cell division, inflammatory diseases such as sepsis in the complete comple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation allergy, sepsis, autoimmunity, allograft rejection and other disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 19; Page 194-196; 209pp; English..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-500222/53.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides novel death Domain (DD) and death effector CC domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DED or NB-ARC domain and identifying an effective agent (e.g. protein or drug) that binds the DD, DED or NB-ARC domain. The invention is also useful for CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC modulating the level of cell process such as apoptosis, cell adhesion, CC cell proliferation, cell immunoglobulin class switching. DDs, DED and NB-ARC domain and B cell immunoglobulin class switching. DDs, DED and NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. CC DD, DED or NB-ARC domain proteins are used to treat infection, allergy, allograft rejection, sepsis, keratinocyte inflammatory hyperplasia and smooth muscle cell proliferation in arteries CC inflammatory hyperplasia and smooth muscle cell proliferation in arteries CC interfeuxing balloon angloplasty (restenosis). The invention is also used in interleuxin-1 receptor-associated kinase (IRAK)-4 full length gene

                                                                                                                                                                         The invention relates to a compound of 8-50 nucleobases which is targeted to a nucleic acid encoding interleukin-1 (IL-1) receptor-associated kinase-4, specifically hybridising with the nucleic acid and inhibiting the expression of the encoded product. Also disclosed is the compound hybridising with an 8-nucleobase portion of an active site on a nucleic acid molecule encoding IL-1 receptor-associated kinase-4. The antisense oligonucleotide is useful for treating an animal having a disease or conditions associated with IL-1 receptor-associated kinase-4, e.g. cancer (particularly renal cancer), inflammatory disease or an infection. The antisense compounds are useful for diagnostics, therapeutics, prophylaxis, or as research reagents or kits. The current sequence represents the human IL-1 receptor-associated kinase-4 encoding sequence (GenBank accession number NM_016123)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
The present sequence is a cDNA encoding human interleukin (IL)-1 r associated kinase (IRAK)-4. IRAK associate with activated IL-1, II other receptors and act to transduce signals originating from the activated receptors, ultimately leading to a variety of downstream effects such as nuclear factor (NF)-kappaB activation. The IRAK-4 inhibitors are useful for treating inflammatory diseases such as pulmonary diseases and diseases of the airway (e.g., adult respira
                                                                                                                                                                                                                                                                                                       Novel human interleukin-1 receptor associated kinase polypeptide, useful for identifying modulators of the polypeptide for treating gout, asthma, allergic rhinitis, multiple sclerosis and skin cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; interleukin-1 receptor associated kinase-4; IRAK-4; cytostatic; II; antibacterial; antiinflammatory; ophthalmological; vasotropic; OPD; chronic obstructive pulmonary disease; neuroprotective; chronic cough; adult respiratory disease syndrome; pulmonary fibrosis; asthma; ARDS; interstitial lung disease; allergic rhinitis; transplant rejection; autoimmune disease; rheumatoid arthritis; systemic lupus erythematosus; multiple sclerosis; diabetes; cancer; solid tumour; lymphoma; stroke; cardiovascular disease; atherosclerosis; neurodegenerative disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC pulmonary fibrosis, interstitial lung disease, asthma, chronic cough or CC allergic rhinitis, systemic lupus erythematosus, multiple sclerosis or CC diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), CC cardiovascular diseases (e.g., stroke and atherosclerosis), diseases of the central nervous system (e.g., neurodegenerative disease), CD14 CC mediated sepsis, non-CD14 mediated sepsis, osteoparthritis, osteoparosis, CC psoriasis, diseases of the skin (e.g., rash, contact dermatitis, atopic clarative colitis), laflammatory bowel disease (e.g., Crohn's disease and CC ulcerative colitis), Behoet's syndrome, ankylosing spondylitis, gout, CC sarcoidosis and ophthalmic diseases and conditions. The inhibitors of CC resulting from the activation of an interleukin-1 receptor (IL-IR)/TO11 cc receptor in a cell. They also inhibit the activation of a transcription CC resulting from the activation of an interleukin-1 receptor (IL-IR)/TO11 cc factor that activates NFkappaB in the cell. IRAK-4 is used to create a cc nonhuman transgenic animal which is useful for testing the function of CC IRAK-4 in vivo, to generate models for the study of inflammatory collection in a cell inflammatory diseases and conditions. IRAK-4 sequences or lake-4-related inflammatory diseases and conditions. IRAK-4 sequences are also used in cene therapy and in anti-sense therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:

conhibitors are useful for treating inflammatory diseases such as commonary diseases and diseases of the airway (e.g., adult respiratory disease syndrome (ARDS), chronic obstructive pulmonary disease (OPD), company fibrosis, interstitial lung disease, asthma, chronic cough or callergic rhinitis), transplant rejection, autoimmune diseases (e.g., creation of arthritis, systemic lupus erythematosus, multiple sclerosis or diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), correct diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), correct diabetes), cancer (e.g., stroke and atherosclerosis), diseases of the central nervous system (e.g., neurodegenerative disease), cD14 corrected sepsis, non-CD14 mediated sepsis, osteoparthritis, osteoporosis, corrected dermatitis), inflammatory bowel disease (e.g., Crohn's disease and conditions of activity or expression are used to inhibit signal transduction cresulting from the activation of an interleukin-1 receptor (IL-IR)/Toll receptor in a cell. They also inhibit the activation of a transcription of activation of activates NFkappaB in the cell. IRAK-4 is used to create a condumnant transgenic animal which is useful for testing the function of a transcription of activates and conditions and for the development of potential treatments corrected inflammatory diseases and conditions. IRAK-4 sequences are consistent than the cell of the study of inflammatory corrected inflammatory and incare the activation of a transcription of a corrected inflammatory diseases and conditions. IRAK-4 sequences

The invention relates to novel isolated lung small cell cancer antigen polynucleotides (I) and polypeptides (II) used in a method of detecting cancer in a patient. The method is optionally performed by utilising oligonucleotides (III), where the biological sample from the patient is contacted with (III), detecting the amount of polynucleotide hybridised to (III) in the sample and comparing the amount of polynucleotide to a predetermined cut-off value and thereby determining cancer in a patient. (I), (II) or antigen-presenting cells expressing (II) is useful for stimulating and/or expanding T cells specific for a tumour protein. The method comprises contacting T cells specific for a tumour protein. The composition comprising (I) is useful for stimulating an immune response in a patient and for inhibiting the development of a cancer especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lung tumor polynucleotide and polypeptides useful in therapy and diagnosis of cancer especially lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lung cancer in a patient. An isolated T cell population is useful for removing tumour cells from the biological sample and for inhibiting the development of cancer in a patient. AAS61460-AAS61874 represent novel human lung small cell cancer antigen coding sequences of the invention
                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                  31-MAR-2000; 2000US-00540217.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC sequences. (I) is useful as hybridisation probes, polymerase chain correction (PCR) primers, oligomers, and for chromosome and gene mapping, cc and in recombinant production of (II). The polymucleotides are also used ci n diagnostics as expressed sequence tags for identifying expressed cc in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is constituted in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging cof sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The cc diagnostics, forensics, gene mapping, identification of mutations cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and camino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this content trains in the printed specification, but was obtained in celetronic format directly from WIPO at the invention with a product of the invention with a product of the invention.

The antisense oligonucleotide is useful for treating an animal having a disease or conditions associated with IL-1 receptor-associated kinase-4, e.g. cancer (particularly renal cancer), inflammatory disease or an infection. The antisense compounds are useful for diagnostics, therapeutics, prophylaxis, or as research reagents or kies. The current sequence is utilised in an example from the invention in the design of antisense oligonucleotides, and represents the complement of the human DNA sequence that is given as GenBank accession number AC016143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     to.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense oligonucleotides for modulating II-1 receptor-associated kinase-4 gene expression, particularly useful for preventing, delaying treating e.g. cancer (e.g. renal cancer), inflammatory disease or an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 31000 BP; 9247 A; 5856 C; 5924 G; 9973 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     kinase-4, specifically hybridising with the nucleic acid and inhibiting the expression of the encoded product. Also disclosed is the compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a compound of 8-50 nucleobases which is targeted to a nucleic acid encoding interleukin-1 (IL-1) receptor-associated
                                                                                                                                                                                                                                                                                                               NB-ARC
                                                                                                                                                                                                                                                                                                                                                                                                           Human IRAK4 short gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAD40084 standard; DNA; 211

                                                                                                                  밁
                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated polypeptide comprising a death CCC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC COmmin (DED) (NGPR-interacting Death Domain), with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent and CC detecting the association of the domain and the candidate binding agent (CC by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass cc spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC invention is useful for modulating the activity of oncogenic proteins, for treating apathology caused by the oncogenic proteins and for treating bacterial infections by modulating the activity of bacterial cCC discovery of drugs that suppress infection, inflammation, allergy, cs useful for treating immune-based pathologies, pathologies associated consisted therenay and gene therapy. The present sement is used in antisense therapy and gene therapy. The present sement is need in antisense consisted therapy and gene therapy. The present sement is need in antisense consisted therapy and gene therapy. The present sement is need in antisense consisted therapy and gene therapy.

                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                            Score

Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCCGAGGCGGCCGACATG-dT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.75 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC

                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB seq length: DB seq length:

Sequence 1, Application US/09863549

Patent No. 6576444

GENERAL INFORMATION:
APPLICANT: Cao, Zhaodan
ITILE OF INVENTION: IRAK3 Polypeptides, Polynucleotides and Methods
TITLE OF INVENTION INDEER: US/09/863,549

CURRENT APPLICATION NUMBER: US/09/863,549

CURRENT APPLICATION NUMBER: 09/135,232

PRIOR APPLICATION NUMBER: 09/135,232

PRIOR APPLICATION NUMBER: 09/135,232

PRIOR APPLICATION NUMBER: 09/135,232

PRIOR PILLING DATE: 1998-08-17

NUMBER OF SEQ ID NOS: 2

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 1

LENGTH: 2288
                                                                                                                                                                                RESULT 6
